

STANDARDS-BASED CYBERSECURITY TRAINING

ISA IACS Cybersecurity Training Camp

Gain the operations-focused skills training needed to safeguard industrial control systems from cyberattack

Only a staff well trained in operations-focused cybersecurity can protect the vital industrial automation software, systems, and devices that control an industrial facility. These highly integrated courses comprise the most comprehensive set of skills-based operational technology (OT) cybersecurity training in the marketplace—covering how to best leverage the ISA/IEC 62443 series of industrial automation and control system (IACS) standards.

- Choose from four industrial cybersecurity training courses and aligned certificate exams—all offered at one location this May
- Instruction covers the complete lifecycle of industrial automation and control system (IACS) cybersecurity including: assessment, design, implementation, operations, and maintenance
- Based on ISA/IEC 62443, the world's only consensus-based series of IACS standards
- Rigorous, hands-on instruction—from subject-matter experts using industry-supported IACS equipment—developed by ISA, the global leader in industrial cybersecurity standards and training

Location

1898 & Co., a
Division of Burns
& McDonnell
1700 W Loop S,
Suite 1500
Houston, TX

Class Schedule

2-3 May

Using the ISA/IEC 62443 Standards to Secure Your Control Systems (IC32)

Optional certificate exam: ISA/IEC 62443 Cybersecurity Fundamentals Specialist

4-6 May

Assessing the Cybersecurity of New or Existing IACS Systems (IC33)

Optional certificate exam: ISA/IEC 62443 Cybersecurity Risk Assessment Specialist

11-13 May

IACS Cybersecurity Design & Implementation (IC34)

Optional certificate exam: ISA/IEC 62443 Cybersecurity Design Specialist

16-18 MAY

IACS Cybersecurity Operations & Maintenance (IC37)

Optional certificate exam: ISA/IEC 62443 Cybersecurity Maintenance Specialist
